

Oney Bank Improved Productivity of Managing Projects & QA Using SpiraTest from Inflectra

SpiraTest let Oney Bank replace their manual Excel files with a new centralized system for managing activities and projects.

Industry

Financial Services: Banking

Objective

Modernize Microsoft Office-based tool set with an easy-to-use quality assurance and project management system..

Approach

Sought a single, complete solution to manage their QA processes.

Business Outcomes

- Ability to automatically generate QA metrics for the first time.
- One centralized system for standardized QA processes.

Technology Outcomes

- Replaced multiple obsolete tools with a single modern solution.
- Consolidated testers, developers and designers on one tool.
- Increased productivity using native tool features unavailable with previous solution.

“SpiraTest...is the best tool in terms of quality and value compared to the other competing programs available on the market.. the time, productivity and cost savings are transparent...”

- Benjamin-Michel GRIFFART, Technical Test Analyst and SpiraTest Administrator

Improving Quality Assurance and Increasing Productivity

Oney Bank was managing their QA and project management on a suite of outdated tools. After thorough research, they elected to migrate to Inflectra’s SpiraTest platform to modernize their front office and back office QA systems. Using SpiraTest, Oney Bank is managing requirements, test cases, and defects in customizable and scalable workflows all in one tool.

Solution at a Glance

Products Used:

- SpiraTest
- RemoteLaunch

Features Used:

- Requirements Management
- Defect Tracking
- Custom Reporting
- Test Management
- Test Execution Tracking
- Program Management
- Jira Data Synchronization

Scale of Implementation:

- ~ 200 projects
- ~ 240 users
- ~ 50 concurrent users

Background

Oney Bank specializes in the design of innovative payment solutions and financial services and seeks to provide businesses with excellent purchasing experiences in stores and online. Oney is based in France and conducts banking and commerce business with 400 trading and online partners and 7.6 million customers in 11 countries in Europe and Asia.

Oney teams primarily qualify and validate their back-office processes including their mainframe, and their front-office activities such as managing payments, insurance and credit offers. They oversee approximately 200 projects. The 240 users take advantage of both waterfall and agile methodologies.

Challenge

Prior to using SpiraTest, Oney employed Microsoft Excel to manage projects, test documentation and defect tracking and Microsoft Word to handle any screenshots.

In addition, the different groups of

designers all used different tools, further complicating project coordination.

Modernize the System

Oney wanted a single, integrated platform to manage requirements, create and reference test cases, run test campaigns, log and track test runs, create tasks and log defects.

Solution

Oney Bank conducted thorough market research and determined that only SpiraTest could provide the features and quality they sought in a single tool. SpiraTest also proved to be the best value.

Benefits

Oney uses SpiraTest from start to finish to design, develop, test, and report their projects. As a result, they are saving time in developing and testing the version upgrades of their application while growing and evolving their test repository. Customizing the Spira/Jira open-source plugin allows them to cover all possible and imaginable needs. They are working in a more streamlined and productive manner in a modern tool that provides them a great value.
